The family of modular TraNET data acquisition instruments provides turnkey solutions to many complex measurement problems. TraNET data acquisition systems are flexible, compact and portable. They can be used to solve in situ problems in automotive, power generation, transportation and train systems.

The TraNET system allows you to monitor a remote engine via LAN, or verify and test an injection system. With the Continuous Data Recorder mode, a long duration event can be stored to disk, gap free in real-time, and analysed later. If applications require complex triggering across many channels, TraNET can help you capture sequential blocks of data, without any loss, using the unique ECR Event Controlled Recording mode.

The powerful application software TranAX not only helps to quickly configure many acquisition channels, but also provides the right post-processing tools to analyse complex waveforms.

General Specification

- Ethernet Connection: Gbit, RJ45 connector
- Hard disk: 200 GB SSD
- Power Supply: 110 V - 230 V, 50/60 Hz
- Power Consumption:
    - TraNET 204   max. 40 W
    - TraNET 404   max. 60 W
- Operating Temperature: 0 .. 45 °C
- Storage Temperature: -20 .. 60 °C
- Rel. Humidity: Up to 31°C: < 80%
- 31°C ..45°C: decreasing to < 50%

- Max. Operating Elevation: 2'000m
- Recording Modes: Scope, Mulit Block, Continuous, ECR
- Dual sample rate recording (with ECR only)
- Digital inputs (Markers)
  (synchronized with analog signals)
- LXI compatible
- IVI-Driver with sample programs for C++/C#, VB and Lab-VIEW
- Device configuration over embedded Website

Device Synchronisation

Sync-Link

In some time-critical applications it is necessary to synchronize multiple instruments with a common reference clock and a common trigger in order to compare data acquisitions across multiple devices. The TraNET Sync-Link box takes care about these two important tasks.

The Sync-Link box is available in two variants for up to 8 or 16 devices, allowing systems up to 256 inputs. The Sync-Link can also be used with the TraNET PPC or TraNET EPC devices allows systems even up to 1024 inputs.

GPS Synchronisation

TraNET FE devices can be equipped with a GPS receiver module for time synchronisation or location tracking.

GPS timing synchronisation allows to sync several TraNET or 3rd part measurement devices without any cable connection between them.

Specification
- Timing precision: < 12.5 ns
- Connector/Cable: RJ45, Cat. 6
- Max Cable length: 10 m (longer cable on request)

Specification:
- Timing precision: ±2 us
- Long time drift: 0 ppm
- 6 channel GPS C/A-code receiver
- up to 300 m distance to antenna

TraNET FE 204

TraNET FE 204 devices are equipped with up to two 4-channel modules or one 8-channel TPCE DAQ module.

On Single Ended modules (SE) two inputs can be linked together for having a differential input. Differential ended modules (Diff) can also be used in single ended mode by using only the positive input.

For more detailed information see the specification table at pages 6/7.

Device Options

DC Powered

TraNET FE devices are equipped with an internal 110/230V AC power supply. Optional the device is available with a DC power supply input. This allows to use 12 V car DC power or solar panels and battery packs.

DC powered TraNET FE are delivered with an external 110/230V AC/DC power supply for using the device at the standard main power line.

Specification:

- Input Voltage: 10 - 36 VDC
- Power Consumtion: 30 - 60 W
  (depends on installed cards)
- Powerplug: SFV 40 *(IEC 60130-9)*

Dust-Proof

TraNET FE Dust-Proof devices are the perfect data acquisition instruments for dusty and muddy environment. They do not have any ventilation to the outside, preventing any air flow entering the device.

The Dust-Proof option is available for the 204 or 404 chassis type and all different sampling rates.

Operating conditions

- Operating Temperature: 0 .. 35 °C, higher temperature possible when free air flow is applied over the instrument.
- Storage Temperature: -20 .. 60 °C
- Rel. Humidity: Up to 31°C: < 80%
- 31°C ..45°C: decreasing to < 50%
- Max. Operating Elevation: 2'000m

Software

TranAX

TranAX is the universal data acquisition software from Elsys designed for TPCX/TPCE data acquisition cards and the turnkey TraNET data acquisition instruments.

Key Features:

- Configures quick and easy many analog input channels, no programming required
- Data visualization in Multi-Waveform displays
- Several cursor for easy data readout and reporting
- X-Y data display
- FFT Analysis width different scaling and windows function
- Measurement data - video synchronization
- More than 40 scalar functions to measure any significant waveform parameter on time or FFT curves
- Powerful formula editor for more than 60 mathematics functions, syntax highlighting, for-loops, array calculations, string manipulations, etc.
- Curve fitting (Polynomial regression)
- Autosequence-macro's for easy to set up, fast automated measurements
- English and German version

LabVIEW Instrument Driver

Elsys provides a LabVIEW instrument driver which is fully compliant with the NI driver design guidelines. The instrument drivers provides the following features:

Key Features:

- Ready-made measurement flow-control VI's for scope, multiblock, continuous and ECR measurement modes
- Express VI's for amplifier and trigger settings
- VI's for data readout
- Express VI's for setup the connection to the modules/instruments

C++/C# TpcAccess API

TpcAccess API is based on a client/server architecture and can be integrated in any custom specific software. It handles all network traffic and synchronisation task when several clients are connected to the same device.

*1)   At 16 bit modules, the resolution will be reduced to 14 bits at sample rates over 1/4 of the max. sample rate.

*2)   The input noise depends on the sample rate.

*3)   At 14 bit modules the SNR will be reduced by 2 dB

*4)   At 8-channel modules the SNR will be reduced by 3 dB
